**Box Check**—A stopping with a hole in it to allow a conveyor to pass through used to prevent intake air from flowing across the conveyor.

a) option (1)

b) option (2)  

[Diagram of option (2)]

**Check Curtains**—A partition made of incombustible material, used to deflect air to the working place, constructed in a manner to allow the passage of miners and machinery.

[Diagram of Check Curtains]

**Door**—A partition made of incombustible material, used to deflect air to the working place, constructed in a manner to allow the passage of miners and machinery.

*NOTE: Symbol should point in the direction door(s) open.*

b) Mine Door or Machine Door  

[Diagram of Mine Door or Machine Door]
c) Set of Airlock Doors

Example

**Fan--** A mechanical device powered by an electrically driven motor to pull or push air through the mine workings.

**Line Brattice--** A partition made of incombustible material used to direct air to the working face, usually maintained to within ten (10) feet of the face.

**Overcast--** An enclosure built in an intersection of mine passages which allows two air currents to cross without mixing. One air current crosses the other above the coal seam or in some instances through pipes.
**Undercast**-- Similar to an overcast except that one air current passes under the other below the coal seam.

a) proposed  
b) built

**Regulator**-- An adjustable door or opening in a stopping generally built across a return airway and used to adjust the amount of air passing through the airway in order to properly distribute airflow.

**Stoppings**-- A permanent stopping is a solid, incombustible, substantial wall built across a mine passage used to separate intake air from return air, to direct air through the mine, to form escapeways, and to isolate belt conveyor entries. A temporary stopping
is built of less substantial material than permanent ones, used in places where the ventilation will be changed and generally replaced by permanent stoppings.

*NOTE: Proposed stoppings should use *dashed* symbols.*

a) temporary  b) permanent

[Diagram of temporary stopping]

a) Example  b) Example

**Seal**— A stopping built of greater thickness and more substantial construction than a stopping, used to isolate abandoned areas of a mine from the active workings.
